

Patient Ready Repair Service

Pioneer Industries Inc. specializes in molecular re-evacuation service. Our proprietary vacuum system allows us to restore vacuums to the industry standard making your liquid oxygen equipment perform efficiently as possible. We do all vacuum work in-house with a fast turnaround time and ALL vacuums come with a 2 year warranty.

For Patient Ready Repairs, we determine if a reservoir/portable needs a new vacuum by performing an NER (Normal Evaporation Rate) test, which tells how much liquid oxygen is evaporating per day. If the equipment does not pass NER test, it will require a new vacuum. All reservoirs and portables are re-evacuated for a minimum of 48 hours and NER tested again after the vacuum is restored to ensure specifications are met. Some portables require weld repairs on brackets or feet to complete the vacuum restoration, which is an additional charge.

REVAC Only SERVICE

For our clients that perform plumbing repairs in-house, we offer a VACUUM ONLY service. Clients can send tanks completely stripped down to the bare dewar for vacuum service and FAST turnaround time. All vacuums come with a 2 year warranty.

2 Year Warranty
